MARKET SENSITIVE INFORMATION
EMBARGOED UNTIL: 10:35 (TOKYO), 24 July 2014

Markit/JMMA Flash Japan Manufacturing PMI™

Output stagnates despite return to growth of exports

Key points:

- Flash Japan Manufacturing PMI™ at 50.8 (51.5 in June). Slight slowdown in growth registered in July.
- Flash Japan Manufacturing Output Index at 50.0 (52.4 in June). Output unchanged.

Data collected 11 – 22 July.

Today sees the third public release of the **Markit/JMMA Flash Japan Manufacturing Purchasing Managers' Index™ (PMI™)**. Published on a monthly basis approximately one week before final PMI data are released, this makes the PMI the earliest available indicator of manufacturing sector operating conditions in Japan. The estimate is typically based on approximately 85%–90% of total PMI survey responses each month and is designed to provide an accurate indication of final PMI data.

Flash Japan Manufacturing PMI™ Summary

50.0 = no-change on previous month (seasonally adjusted)

PMI	Increase, slower rate
Output	No change, from growth
New Orders	Increase, slower rate
New Export Orders	Increase, change of direction
Employment	Increase, faster rate
Backlogs of Work	Decrease, slower rate
Output Prices	Increase, change of direction
Input Prices	Increase, faster rate
Stocks of Purchases	Decrease, change of direction
Stocks of Finished Goods	Increase, change of direction
Quantity of Purchases	Decrease, change of direction
Suppliers' Delivery Times	Lengthened, change of direction

Amy Brownbill, Economist at Markit, which compiles the survey said:

“Japanese manufacturers’ new orders remained in growth territory for the second month running, while there was a rise in new exports for the first time in four months.

“These weren’t enough to prevent output stagnating, although this most likely reflects a little payback from the solid gains seen in June and the on-going unwinding of the impact of the hike in sales tax earlier in the year.

“Looking through this noise therefore remains a challenge, but we note payroll numbers rose again suggesting manufacturers retain some positive forecasts for the coming months.

50 = no change on previous month

Note to Editors:

Final July data are published on 1 August.

The Markit/JMMA Japan Manufacturing PMI™ is based on data compiled from monthly replies to questionnaires sent to purchasing executives in over 400 industrial companies. The panel is stratified by Standard Industrial Classification (SIC) group, based on the industry contribution to GDP. The manufacturing sector is divided into the following 8 broad categories: Basic Metals, Chemicals & Plastics, Electrical & Optical, Food & Drink, Mechanical Engineering, Textiles & Clothing, Timber & Paper, and Transport. The **flash** estimate is based on around 85% of total PMI survey responses each month and is designed to provide an accurate advance indication of the final PMI data.

The average differences between the flash and final PMI index values (final minus flash) since comparisons were first available in January 2008 are as follows (differences in absolute terms provide the better indication of true variation while average differences provide a better indication of any bias):

Index	Average difference	Average difference in absolute terms
Japan Manufacturing PMI ⁽¹⁾	0.0	0.3
Japan Manufacturing Output Index ⁽²⁾	0.0	0.6

Survey responses reflect the change, if any, in the current month compared to the previous month based on data collected mid-month. For each of the indicators the 'Report' shows the percentage reporting each response, the net difference between the number of higher/better responses and lower/worse responses, and the 'diffusion' index. This index is the sum of the positive responses plus a half of those responding 'the same'. Diffusion indexes have the properties of leading indicators and are convenient summary measures showing the prevailing direction of change. An index reading above 50 indicates an overall increase in that variable, below 50 an overall decrease.

Markit do not revise underlying survey data after first publication, but seasonal adjustment factors may be revised from time to time as appropriate which will affect the seasonally adjusted data series. Historical data relating to the underlying (unadjusted) numbers, first published seasonally adjusted series and subsequently revised data are available to subscribers from Markit. Please contact economics@markit.com.

Notes

1. The Manufacturing PMI is a composite index based on a weighted combination of the following five survey variables (weights shown in brackets): new orders (0.3); output (0.25); employment (0.2); suppliers' delivery times (0.15); stocks of materials purchased (0.1). The delivery times index is inverted.
2. The Manufacturing Output Index is based on the survey question "Is the level of production/output at your company higher, the same or lower than one month ago?"

About JMMA

Japan Materials Management Association (JMMA) is a voluntary organization, established by members in 1958. JMMA contributes to the practice of business management in the field of research, education, books and standardization of materials / purchasing management. In relation to education, JMMA is the organization which trains Purchasing Managers, the specialists of materials / purchasing. JMMA is the organization which gives the certification of "Certified Purchasing Manager (CPM)", the globally recognized certification for purchasing managers. JMMA is also the representative of IFPMM (International Federation of Purchasing and Materials Management) in Japan. JMMA, 6F Iwamotochokiita-bld, 1-8-15, Chiyoda-ku, Tokyo, Japan.
