Insurance growth remains strong in September

KEY FINDINGS

Insurance retains top spot as fastest-growing sector across Asia for third successive month

Trends within Consumer Goods category improve, led by stronger expansion in Beverages & Food

Downturn in Basic Materials sustained despite growth in Chemicals

Asia Sector PMI indices are compiled from responses to questionnaires sent to purchasing managers in IHS Markit’s Asian PMI survey panels, covering over 6,000 private sector companies in 13 countries.

Indices are available for the basic materials, consumer goods, consumer services, financials, healthcare, industrials and technology industry groups, and sub-sectors of these groups.

September survey data indicated that Insurance remained the strongest-growing sub-sector across Asia. However, trends within the broader Financials category softened, with a contraction in Real Estate accompanied by weaker upturns in Insurance and Banks. Consequently, Consumer Goods moved to the top of the wider industry rankings, benefiting from stronger growth in Beverages & Food and Household & Personal Use Products. Output in Automobiles & Parts was broadly stable.

Meanwhile, sustained production cutbacks in Metals & Mining and Forestry & Paper Products kept the parent grouping of Basic Materials in contraction territory during September, although Chemicals output expanded.

Elsewhere, Pharmaceuticals & Biotechnology firms moved to second in the sub-sector growth rankings after registering a solid expansion in output during September, while Technology Equipment production rose at a modest, but faster rate.
Methodology

The IHS Markit Asia Sector PMI™ indices are compiled by IHS Markit from responses to questionnaires sent to purchasing managers in IHS Markit’s Asian PMI survey panels, covering over 6,000 private sector companies in 13 countries.

IHS Markit maps individual company responses to industry sectors according to standard industry classification (SIC) codes. Asia Sector PMI indices are available for the basic materials, consumer goods, consumer services, financials, healthcare, industrials and technology industry groups, and sub-sectors of these groups.

Survey responses are collected in the second half of each month and indicate the direction of change compared to the previous month. Survey responses are weighted by country of origin, based on sectoral gross value added. A diffusion index is calculated for each survey variable. The index is the sum of the percentage of ‘higher’ responses and half the percentage of ‘unchanged’ responses. The indices vary between 0 and 100, with a reading above 50 indicating an overall increase compared to the previous month, and below 50 an overall decrease. The indices are then seasonally adjusted.

For manufacturing sectors, the headline figure is the Purchasing Managers’ Index™ (PMI). The PMI is a weighted average of the following five indices: New Orders (30%), Output (25%), Employment (20%), Suppliers’ Delivery Times (15%) and Stocks of Purchases (10%). For the PMI calculation the Suppliers’ Delivery Times Index is inverted so that it moves in a comparable direction to the other indices.

For services sectors, or sectors covering both manufacturing and services, the headline figure is the Business Activity Index. This is a diffusion index calculated from a question that asks for changes in the volume of business activity or output compared with one month previously.
