IHS Markit report on October PMI

The Purchasing Managers’ Index™ (PMI™) for the United States (+3.9) has shown substantial improvement in manufacturing and services activity compared to the previous month. This positive trend continues the recovery process initiated by the fiscal and monetary stimulus programs launched in March 2020. The latest reading is the highest since February 2020, indicating a strong recovery in the months following the initial impact of the pandemic.

The composite PMI score, which combines the manufacturing and services PMIs, reached 56.7 in October, indicating that the overall economy is expanding at a faster rate than in the previous month.

The survey data also showed that the pace of job creation accelerated in October, with employment rising at the fastest rate since February 2020. This positive development suggests that the labor market is recovering from the initial shock of the pandemic.

In terms of new orders, the index increased to 60.2, the highest since February 2020, indicating a strong demand for products and services. This suggests that businesses are optimistic about future sales.

The survey data also showed that input prices continued to rise in October, with the index rising to 79.2, the highest since the survey began in 2010. This increase is likely to be passed on to consumers in the form of higher prices.

The October PMI data suggests that the U.S. economy is recovering from the initial impact of the pandemic, with manufacturing and services activity expanding at a faster rate than in the previous month. The labor market is also showing signs of recovery, with job creation accelerating.

**Notes:**
- The Purchasing Managers’ Index is a monthly survey of purchasing managers in the United States.
- The index is calculated on a scale of 0 to 100, with a reading above 50 indicating expansion and a reading below 50 indicating contraction.

**PMI Methodology**

The PMI is calculated using a weighted average of survey responses to questions about production, new orders, employment, inventory levels, and supplier delivery times. The index ranges from 0 to 100, with a reading above 50 indicating expansion and a reading below 50 indicating contraction.
