Jibun Bank Flash Japan Composite PMI®

Including Jibun Bank Flash Japan Manufacturing and Services PMI®

Output growth accelerates in Japan during July

Key findings

Flash Composite Output Index, Jul: 51.2
(Jun Final: 50.8)

Flash Services Business Activity Index, Jul: 52.3
(Jun Final: 51.9)

Flash Manufacturing PMI, Jul: 49.6
(Jun Final: 49.3)

Today sees the first public release of the Jibun Bank Flash Japan Composite PMI®. Published on a monthly basis approximately one week before final PMI data are released, this makes the PMI the earliest available indicator of private sector operating conditions in Japan. The estimate is typically based on approximately 85%–90% of total PMI survey responses each month and is designed to provide an accurate indication of final PMI data.

Commenting on the latest survey results, Joe Hayes, Economist at IHS Markit, said:

“Trends witnessed in the Japanese private sector so far in 2019 were more-or-less maintained at the start of the third quarter. Composite ‘flash’ data for Japan show a modest improvement in private business output in July, with consumption of services supporting the economy, as it has done in the year-to-date. Overall private sector output expanded at the fastest pace in seven months on the back of faster growth in services activity.

“The manufacturing sector’s plight continued, however, where production was cut in July for the seventh successive month. Weak demand from China remained a key factor behind sluggish demand for Japanese goods. Heightened frictions between Japan and South Korea also add downside risk to the manufacturing supply chain in Japan, creating additional slack that services may once again have to compensate for.”

Jibun Bank Japan Composite Output Index

Index summary

| Index | Sector | Interpretation |
|---------------------------|------------------|--------------------------------|
| Output | Composite | Stronger growth |
| | Manufacturing | Weaker decline |
| | Services | Stronger growth |
| New Orders | Composite | Weaker growth |
| | Manufacturing | Weaker decline |
| | Services | Weaker growth |
| New Export Orders | Composite | Weaker decline |
| | Manufacturing | Weaker decline |
| | Services | Weaker decline |
| Employment | Composite | Weaker growth |
| | Manufacturing | Stronger growth |
| | Services | Weaker growth |
| Backlogs of Work | Composite | Stronger decline |
| | Manufacturing | Unchanged rate of decline |
| | Services | Decline, direction change |
| Output Prices | Composite | Weaker inflation |
| | Manufacturing | Stronger deflation |
| | Services | Weaker inflation |
| Input Prices | Composite | Weaker inflation |
| | Manufacturing | Weaker inflation |
| | Services | Stronger inflation |
| Future Output | Composite | Weaker positive outlook |
| | Manufacturing | Weaker positive outlook |
| | Services | Weaker positive outlook |
| Stocks of Purchases | Manufacturing | Weaker decline |
| Stocks of Finished Goods | Manufacturing | Decline, direction change |
| Quantity of Purchases | Manufacturing | Stronger decline |
| Suppliers' Delivery Times | Manufacturing | Lesser lengthening |

Jibun Bank Flash Japan Manufacturing PMI®

The Jibun Bank Japan Manufacturing PMI® is compiled by IHS Markit from survey responses from a panel of around 400 manufacturers. The headline figure is the Purchasing Managers' Index (PMI), a composite single-figure indicator of manufacturing performance. The PMI is a weighted average of the following five indices: New Orders (30%), Output (25%), Employment (20%), Suppliers' Delivery Times (15%) and Stocks of Purchases (10%). For the PMI calculation the Suppliers' Delivery Times Index is inverted so that it moves in a comparable direction to the other indices.

The headline Jibun Bank Japan Manufacturing Purchasing Managers' Index™ (PMI)® increased to 49.6 in July, from 49.3 in June and below the crucial 50.0 no-change threshold for the third successive month. The latest reading signalled a marginal deterioration in manufacturing sector business conditions when compared to the previous month.

Jibun Bank Flash Japan Services PMI®

The Jibun Bank Japan Services PMI® is compiled by IHS Markit from survey responses from a panel of around 400 service sector companies. The sectors covered include consumer (excluding retail), transport, information, communication, finance, insurance, real estate and business services. The headline figure is the Services Business Activity Index, which tracks changes in the volume of business activity compared with one month previously. A reading above 50 indicates an overall increase compared to the previous month, and below 50 an overall decrease.

The seasonally adjusted Business Activity Index posted 52.3 in July, up from 51.9 in June. This indicated a solid and stronger expansion in Japanese service sector activity and extended the current upward trend that commenced nearly three years ago. The latest index reading was the joint-highest since October 2018.

Methodology

The Jibun Bank Japan Composite PMI® is compiled by IHS Markit from responses to questionnaires sent to a panel of around 400 service sector companies and a panel of around 400 manufacturers. The service sectors covered include consumer (excluding retail), transport, information, communication, finance, insurance, real estate and business services. The panels are stratified by detailed sector and company workforce size, based on contributions to GDP.

Survey responses are collected in the second half of each month and indicate the direction of change compared to the previous month. A diffusion index is calculated for each survey variable. The index is the sum of the percentage of 'higher' responses and half the percentage of 'unchanged' responses. The indices vary between 0 and 100, with a reading above 50 indicating an overall increase compared to the previous month, and below 50 an overall decrease. The indices are then seasonally adjusted.

Composite indices are weighted averages of comparable manufacturing and services indices. Weights reflect the relative size of the manufacturing and service sectors according to official GDP data.

The headline figure is the Composite Output Index. This index is a weighted average of the Manufacturing Output Index and the Services Business Activity Index. The Composite Output Index may be referred to as the 'Composite PMI' but is not comparable with the headline manufacturing PMI figure.

The headline services figure is the Services Business Activity Index. This is a diffusion index calculated from a question that asks for changes in the volume of business activity compared with one month previously. The Services Business Activity Index is comparable to the Manufacturing Output Index. It may be referred to as the 'Services PMI' but is not comparable with the headline manufacturing PMI figure.

The headline manufacturing figure is the Purchasing Managers' Index (PMI), a composite single-figure indicator of manufacturing performance. The PMI is a weighted average of the following five indices: New Orders (30%), Output (25%), Employment (20%), Suppliers' Delivery Times (15%) and Stocks of Purchases (10%). For the PMI calculation the Suppliers' Delivery Times Index is inverted so that it moves in a comparable direction to the other indices.

Flash indices are released approximately one week before the 'final' indices. Flash indices are typically based on approximately 85%–90% of total PMI survey responses each month and are designed to provide an accurate indication of final indices.

Final underlying survey data are not revised after publication, but seasonal adjustment factors may be revised from time to time as appropriate which will affect the seasonally adjusted data series.

July 2019 flash data were collected 12-22 July 2019. For further information on the PMI survey methodology, please contact economics@ihsmarkit.com.

Jibun Bank Japan PMI is sponsored by Jibun Bank Corporation

Jibun Bank is an internet retail bank established in 2008 by a joint investment of KDDI – a major telecommunication service provider – and MUFG Bank – Japan's largest bank –. As a "smartphone-centric bank", Jibun Bank has over 3.4 million customer accounts and focuses on providing high-quality financial services via smartphones.

Jibun Bank provides unique services such as "Smartphone ATM", a service allowing to deposit and withdraw money from teller machine without cash card by just scanning a QR code shown on the smartphone app, and "AI Foreign Currency Forecast", a foreign currency trading support tool that predict the rise of foreign exchange rate based on past trend deep learned by an AI (artificial intelligence).

As a member of the "au Financial Group", Jibun Bank aims to play a major role in providing comprehensive smartphone-centric banking services in line with the "Smart Money Concept" and enhance customer experience.
