IHS Markit U.S. Sector PMI™

All seven US sectors report strong growth in June, led by Healthcare

Key findings

Healthcare posts faster output growth than all other sectors

Consumer services and Financials outperform

Technology sector records fastest job creation

Cost inflation strongest in Basic Materials

US Sector PMI™ indices are compiled from responses to questionnaires sent to purchasing managers in IHS Markit's US manufacturing and services PMI survey panels, covering over 1,000 private sector companies. Indices are available for the basic materials, consumer goods, consumer services, financials, healthcare, industrials and technology sectors.

Sharply rising volumes of business activity were recorded across all seven broad categories monitored by the US Sector PMI series in June. That said, all categories except Healthcare experienced a slowdown in growth since May.

Healthcare returned to the top of the output growth rankings in June (index at 67.0, up from 65.1 in May), replacing Consumer Services. This reflected strong demand across both healthcare services and pharmaceutical, biotech and equipment supply chains.

Consumer Services was the second-best performing category in June (index at 65.7, down from 73.6 in May), with Financials (65.6) following closely in third place.

Producers of Basic Materials (index at 58.6) saw the weakest output growth of all sectors in June, which was partly due to capacity constraints and stretched supply chains. The latest rise in production was the slowest since March.

On the jobs front, Technology companies posted the fastest upturn in payroll numbers, followed by Healthcare. Meanwhile, cost pressures were strongest in the Basic Materials and Technology sectors, with the rate of input price inflation hitting survey-record highs in each category.

Methodology

The IHS Markit US Sector PMI™ indices are compiled by IHS Markit from responses to questionnaires sent to purchasing managers in IHS Markit's US manufacturing and services PMI survey panels, covering over 1,000 private sector companies.

IHS Markit maps individual company responses to industry sectors according to standard industry classification (SIC) codes. US Sector PMI indices are available for the basic materials, consumer goods, consumer services, financials, healthcare, industrials and technology sectors.

Survey responses are collected in the second half of each month and indicate the direction of change compared to the previous month. Survey responses are weighted by country of origin, based on sectoral gross value added. A diffusion index is calculated for each survey variable. The index is the sum of the percentage of 'higher' responses and half the percentage of 'unchanged' responses. The indices vary between 0 and 100, with a reading above 50 indicating an overall increase compared to the previous month, and below 50 an overall decrease. The indices are then seasonally adjusted.

For manufacturing sectors, the headline figure is the Purchasing Managers' Index™ (PMI). The PMI is a weighted average of the following five indices: New Orders (30%), Output (25%), Employment (20%), Suppliers' Delivery Times (15%) and Stocks of Purchases (10%). For the PMI calculation the Suppliers' Delivery Times Index is inverted so that it moves in a comparable direction to the other indices.

For services sectors, or sectors covering both manufacturing and services, the headline figure is the Business Activity Index. This is a diffusion index calculated from a question that asks for changes in the volume of business activity or output compared with one month previously.

About PMI

Purchasing Managers' Index™ (PMI™) surveys are now available for over 40 countries and also for key regions including the eurozone. They are the most closely watched business surveys in the world, favoured by central banks, financial markets and business decision makers for their ability to provide up-to-date, accurate and often unique monthly indicators of economic trends. ihsmarkit.com/products/pmi.html
