

# Caixin Flash China General Manufacturing PMI™

## PMI falls to 15-month low in July

### Key Points:

- Flash China General Manufacturing PMI™ at 48.2 in July (49.4 in June). 15-month low.
- Flash China General Manufacturing Output Index at 47.3 in July (49.7 in June). 16-month low.

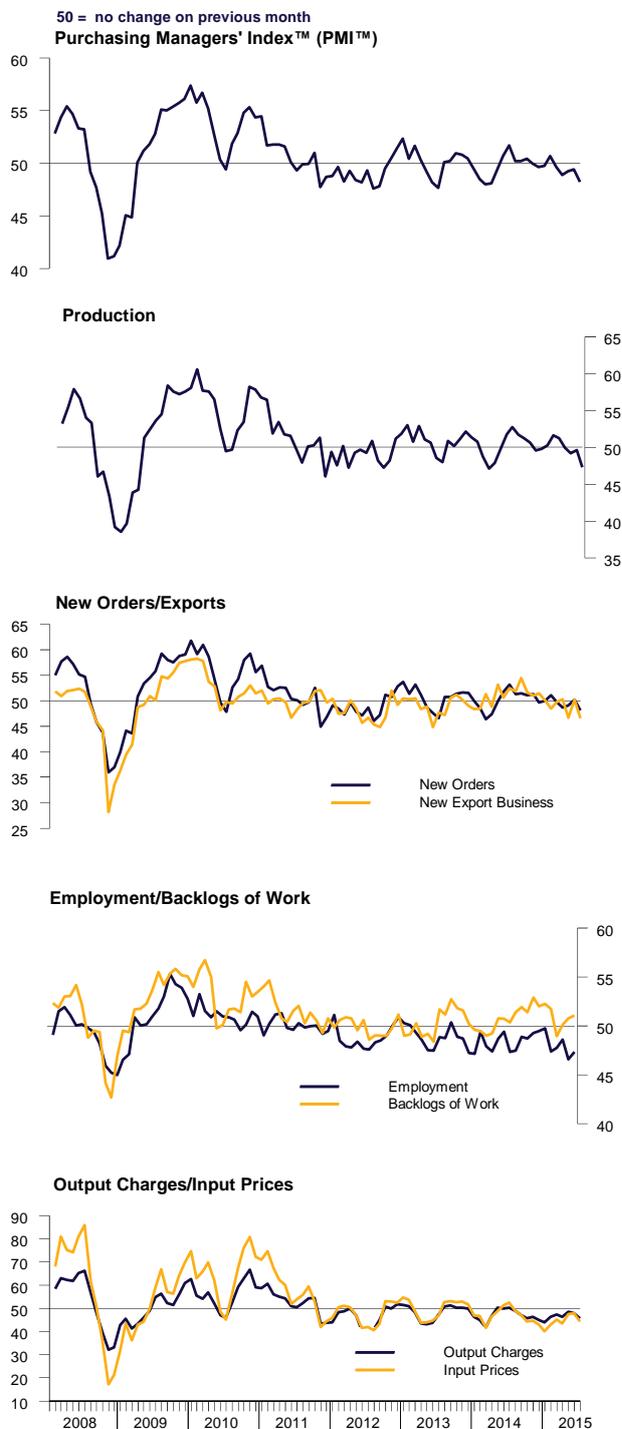

Data collected 13–22 July 2015.

The Caixin Flash China General Manufacturing *Purchasing Managers' Index™ (PMI™)* is published on a monthly basis ahead of final PMI data, making the Caixin PMI the earliest available indicator of manufacturing sector operating conditions in China. The estimate is typically based on approximately 85%–90% of total PMI survey responses each month and is designed to provide an accurate indication of the final PMI data. July final PMI data will be released on 3 August 2015.

### Summary

50.0 = no-change on previous month (seasonally adjusted)

PMI	Decrease, faster rate
Output	Decrease, faster rate
New Orders	Decrease, from increase
New Export Orders	Decrease, from increase
Employment	Decrease, slower rate
Backlogs of Work	Increase, faster rate
Output Prices	Decrease, faster rate
Input Prices	Decrease, faster rate
Stocks of Purchases	Decrease, from increase
Stocks of Finished Goods	Increase, from decrease
Quantity of Purchases	Decrease, from increase
Suppliers' Delivery Times	Lengthening, faster rate

## Notes to Editors:

The Caixin China Report on General Manufacturing is based on data compiled from monthly replies to questionnaires sent to purchasing executives in over 420 manufacturing companies. The panel is stratified geographically and by Standard Industrial Classification (SIC) group, based on industry contribution to Chinese GDP. Survey responses reflect the change, if any, in the current month compared to the previous month based on data collected mid-month. For each of the indicators the 'Report' shows the percentage reporting each response, the net difference between the number of higher/better responses and lower/worse responses, and the 'diffusion' index. This index is the sum of the positive responses plus a half of those responding 'the same'. The **flash** estimate is based on around 85% of total PMI survey responses each month and is designed to provide an accurate advance indication of the final PMI data.

The average differences between the flash and final PMI index values (final minus flash) since comparisons were first available in January 2008 are as follows (differences in absolute terms provide the better indication of true variation while average differences provide a better indication of any bias)

Index	Average difference	Average difference in absolute terms
Caixin China General Manufacturing PMI	0.0	0.4
Caixin China General Manufacturing Output Index	0.1	0.7

The Purchasing Managers' Index™ (PMI™) is a composite index based on five of the individual indexes with the following weights: New Orders - 0.3, Output - 0.25, Employment - 0.2, Suppliers' Delivery Times - 0.15, Stock of Items Purchased - 0.1, with the Delivery Times index inverted so that it moves in a comparable direction.

Diffusion indexes have the properties of leading indicators and are convenient summary measures showing the prevailing direction of change. An index reading above 50 indicates an overall increase in that variable, below 50 an overall decrease.

Markit do not revise underlying survey data after first publication, but seasonal adjustment factors may be revised from time to time as appropriate which will affect the seasonally adjusted data series. Historical data relating to the underlying (unadjusted) numbers, first published seasonally adjusted series and subsequently revised data are available to subscribers from Markit.
