

Nikkei Flash Japan Manufacturing PMI[®]

Business conditions improve at slowest pace since November 2016

Key points:

- Japan Flash Manufacturing PMI falls to 20-month low of 51.6 in July, from 53.0 in June.
- Input and output price inflation both accelerate to multi-year highs.
- Business confidence dips noticeably.

Data collected 12 – 20 July.

Today sees the latest public release of the **Nikkei Flash Japan Manufacturing Purchasing Managers' Index™ (PMI[®])**. Published on a monthly basis approximately one week before final PMI data are released, this makes the PMI the earliest available indicator of manufacturing sector operating conditions in Japan. The estimate is typically based on approximately 85%–90% of total PMI survey responses each month and is designed to provide an accurate indication of final PMI data.

Flash Japan Manufacturing PMI[®] Summary

PMI	Increase, slower rate
Output	Increase, slower rate
New Orders	Increase, slower rate
New Export Orders	Decrease, slower rate
Employment	Increase, slower rate
Backlogs of Work	Decrease, change of direction
Output Prices	Increase, faster rate
Input Prices	Increase, faster rate
Stocks of Purchases	Decrease, faster rate
Stocks of Finished Goods	Decrease, faster rate
Quantity of Purchases	Increase, slower rate
Suppliers' Delivery Times	Lengthened, faster rate
Future Expectations	Positive, weaker optimism

Comment:

Commenting on the Japanese Manufacturing PMI survey data, **Joe Hayes, Economist** at IHS Markit, which compiles the survey, said:

“Flash survey data pointed to a slowing of growth momentum for Japan’s manufacturing sector at the beginning of the third quarter, following a robust performance so far this year.”

“New business grew at a much weaker rate and was broadly flat, while export demand, despite further yen depreciation, deteriorated for a second month running.”

“Slowing demand presents a worrying development given input delivery times lengthened to the sharpest extent in over seven years. Supply chain difficulties reportedly contributed to the fastest rate of input price inflation in since March 2011. Although output prices were raised at a relatively notable pace, the rate of increase was far weaker than that of costs, implying profit margin erosion.”

Nikkei Flash Japan Manufacturing PMI[®] is sponsored by **NIKKEI**

Nikkei is a media organization with newspaper publishing at its core. Our flagship daily newspaper, The Nikkei, has approximately two and a half million subscribers. Nikkei's multi-platform media distribution also includes online, broadcast and magazines.

Since our founding in 1876 as the Chugai Bukka Shimpo (Domestic and Foreign Prices News), we have consistently provided high-quality reporting while maintaining fairness and impartiality. The Nikkei brand has become synonymous with trustworthiness at home and abroad.

Nikkei Inc. offers a range of media platforms to satisfy the diverse needs of our readers. At the core of these services is The Nikkei which has a circulation of approximately two and a half million. Adding further depth to our offerings are our premium content and strong digital technology. The number of paying subscribers to the Nikkei Online Edition, which was launched in 2010, has surpassed 500,000. Our fee-based online services have one of the largest readerships in the world among newspaper publishers. Eight years after its creation, the online edition has evolved from a medium for providing news to readers into a tool that helps people advance their careers.

In 2013, we kicked off the Nikkei Asian Review, an English-language news service provided both online and as a weekly print magazine. The following year, we established an Editorial Headquarters for Asia in Bangkok to deepen our coverage of Asian economic news. In addition, we doubled the number of reporters stationed in Asia outside Japan. 2014 also saw the launch of Nikkei Group Asia Pte., a new company in Singapore tasked with spreading the Nikkei brand in the region. Our goal is to make Nikkei the leading media voice in Asia.

Note to Editors:

Final July data are published on August 1st.

The Nikkei Japan Manufacturing PMI[®] is based on data compiled from monthly replies to questionnaires sent to purchasing executives in over 400 industrial companies. The panel is stratified by Standard Industrial Classification (SIC) group, based on the industry contribution to GDP. The manufacturing sector is divided into the following 8 broad categories: Basic Metals, Chemicals & Plastics, Electrical & Optical, Food & Drink, Mechanical Engineering, Textiles & Clothing, Timber & Paper, and Transport. The **flash** estimate is based on around 85% of total PMI survey responses each month and is designed to provide an accurate advance indication of the final PMI data.

The average differences between the flash and final PMI index values (final minus flash) since comparisons were first available in January 2008 are as follows (differences in absolute terms provide the better indication of true variation while average differences provide a better indication of any bias)

Index	Average difference	Average difference in absolute terms
Japan Manufacturing PMI ⁽¹⁾	0.0	0.3
Japan Manufacturing Output Index ⁽²⁾	0.0	0.5

Survey responses reflect the change, if any, in the current month compared to the previous month based on data collected mid-month. For each of the indicators the 'Report' shows the percentage reporting each response, the net difference between the number of higher/better responses and lower/worse responses, and the 'diffusion' index. This index is the sum of the positive responses plus a half of those responding 'the same'. Diffusion indexes have the properties of leading indicators and are convenient summary measures showing the prevailing direction of change. An index reading above 50 indicates an overall increase in that variable, below 50 an overall decrease.

IHS Markit do not revise underlying survey data after first publication, but seasonal adjustment factors may be revised from time to time as appropriate which will affect the seasonally adjusted data series. Historical data relating to the underlying (unadjusted) numbers, first published seasonally adjusted series and subsequently revised data are available to subscribers from IHS Markit. Please contact economics@ihsmarkit.com.

Notes

1. The Manufacturing PMI is a composite index based on a weighted combination of the following five survey variables (weights shown in brackets): new orders (0.3); output (0.25); employment (0.2); suppliers' delivery times (0.15); stocks of materials purchased (0.1). The delivery times index is inverted.
2. The Manufacturing Output Index is based on the survey question "Is the level of production/output at your company higher, the same or lower than one month ago?"

About IHS Markit (www.ihsmarkit.com)

IHS Markit (Nasdaq: INFO) is a world leader in critical information, analytics and solutions for the major industries and markets that drive economies worldwide. The company delivers next-generation information, analytics and solutions to customers in business, finance and government, improving their operational efficiency and providing deep insights that lead to well-informed, confident decisions. IHS Markit has more than 50,000 business and government customers, including 80 percent of the Fortune Global 500 and the world's leading financial institutions.
